The **OraStretch**® Range-of-Motion (ROM) scales are disposable paper measuring scales for patients and providers to measure the opening, movement and function of the mouth and jaw.

The **OraStretch** scales come in packs of 50, including a vertical, lateral, and protrusion scale.

The **OraStretch** scales were specifically designed for patients with severely limited openings. The tapered ruler design allows for measurement of the smallest openings, down to 3mm.

The **OraStretch** scales also include a lateral movement scale and a pro/retrusion scale. These allow the provider to better gauge the total 360-degree movement of the patients jaw.

With simple use and accurate tracking, patients are motivated and clinicians feel more assured in progress. By quantifying the treatment method and results with concrete measurements, better diagnosis and treatment is possible and use throughout the day.

**OraStretch ROM Scales:**
- Vertical, lateral and pro/retrusion scales
- 50 scales per pack
- Measures to 3mm minimum opening

The OraStretch ROM scales are more accurate and easier to measure the oral opening of severely limited patients for improved tracking and treatment.
